SOFTWARE DEVELOPER

Software developer with experience across the entire application lifecycle, cloud infrastructure, scalable architectures, and serverless solutions.
Practical experience with AWS, IaC, CI/CD, TDD, React, Next.js, and Python.

TECHNICAL SKILLS

- Cloud & Infrastructure: AWS (Lambda, API Gateway, S3, CloudFront, DynamoDB, EventBridge, Cognito, IAM), Terraform, Docker, Linux.
- Back-end & DevOps: Python, Node.js, PostgreSQL, REST APIs, CI/CD, GitHub Actions.
- Front-end: React, Next.js, TypeScript, JavaScript.
- Architecture & Practices: Serverless, Infrastructure as Code (IaC), Monorepo, Scalable Architecture, TDD.

EXPERIENCE

Full Stack Developer | Fundação Cearense de Pesquisa e Cultura (EyON/PaaSIoT) | Remote | Oct 2021 – Present

- Work as a full-stack developer in the EyON ecosystem, a corporate IoT/SaaS platform in a Turborepo monorepo with multiple Next.js/React/TypeScript apps and Python serverless backend on AWS.
- Develop and maintain the core backend: lambdas, APIs, use cases, repositories, business rules, authentication via Cognito (MFA, groups, SSO/Azure AD), company/user/technician management, and auditing.
- Work on the IoT devices module: ingestion and decoding of JSON and binary payloads, uplinks/downlinks, batch firmware/FOTA, integrations with LoRaWAN (TTI/TTN), NB-IoT, WiFi, and dashboards with queries in Timestream.
- Develop AWS infrastructure with Terraform: secure proxy for HERE Maps via CloudFront/Lambda@Edge with JWT validation, API key injection via SSM, and a centralized credential rotation module.
- Fix pentest vulnerabilities (brute force, clickjacking, credential exposure, critical dependencies) and maintain CI/CD pipelines with GitHub Actions, CodePipeline, and CodeBuild.

PROJECTS

BSGame — Reading Gamification Ecosystem (LPT/CNPq) | lptextual.me/bs-game
Architected and developed an end-to-end gamified platform for reading encouragement for the Textual Reading and Production Laboratory (LPT/CNPq), integrating the physical library management system (Biblivre 5) with a distributed cloud infrastructure. The ecosystem consists of 5 independent fronts: a central RESTful API, a PWA focused on readers (memory game and reading tracking), an administrative panel, a synchronizer Desktop agent (Electron), and a report generator. Developed the Biblivre Sync agent with background jobs and direct integration with Biblivre's native PostgreSQL database for automatic synchronization of the physical collection with the cloud, in addition to parsing scripts for the universal bibliographic protocol MARC21 for translating metadata into relational data consumable by the game.
Stack: TypeScript full-stack, Next.js, React, Vite, Electron, PostgreSQL, Drizzle ORM, MongoDB, AWS S3, Zod, Vitest, and Resend.

Recursofy
SaaS Platform for simplifying the allocation of corporate and university resources. Designed the back-end with Node.js, Prisma, and PostgreSQL, utilizing Docker containers for high scalability. Integrated Firebase authentication and an automated notification system via Telegram and email.

Unipad | unipad.jarod.dev
Web application focused on fast and collaborative code sharing. Built the front-end in React.js and the back-end in Node.js with a MongoDB database.

EDUCATION

- **Universidade Estadual do Piauí (UESPI) — Bachelor's Degree in Computer Science | Jan 2021 – Mar 2026**
- **Colégio Técnico de Floriano (CTF/UFPI) — High School and Technical Course | Jan 2017 – Dec 2019**
  Completed high school and a technical course in informatics. Worked as a CNPq and Pibic Jr. scholarship holder, engaging in research projects.

LANGUAGES

English - Technical proficiency (documentation, project collaboration, and professional communication)
